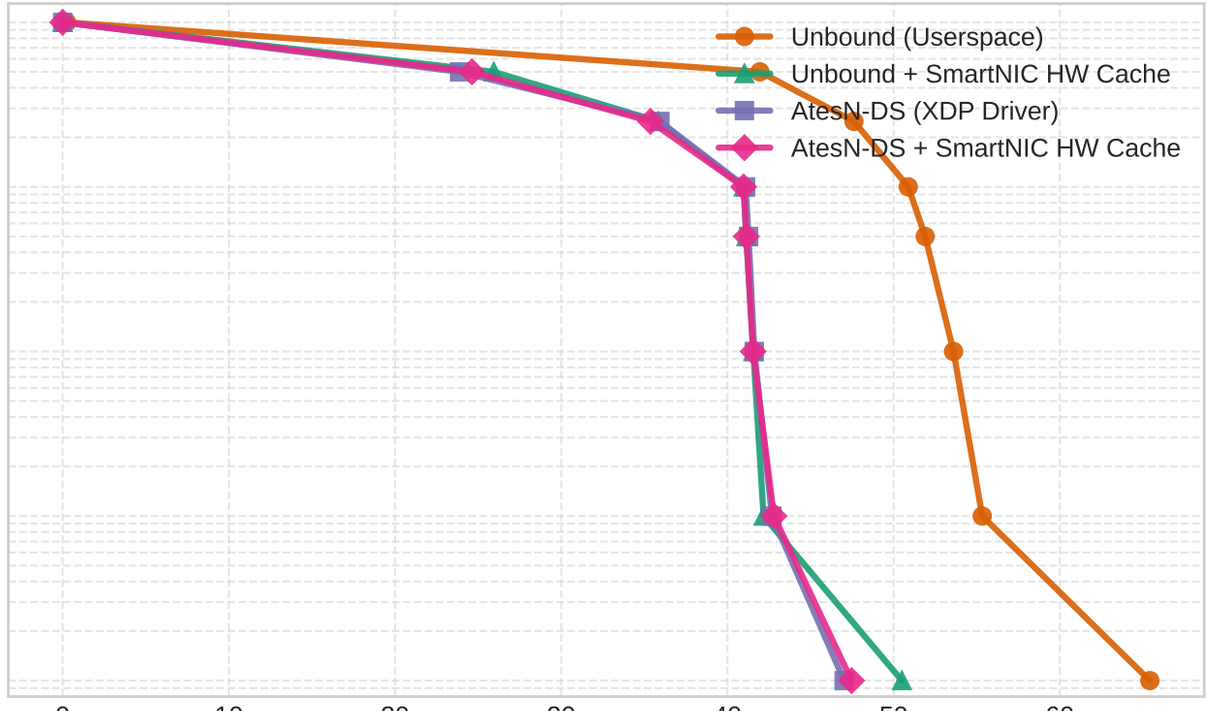
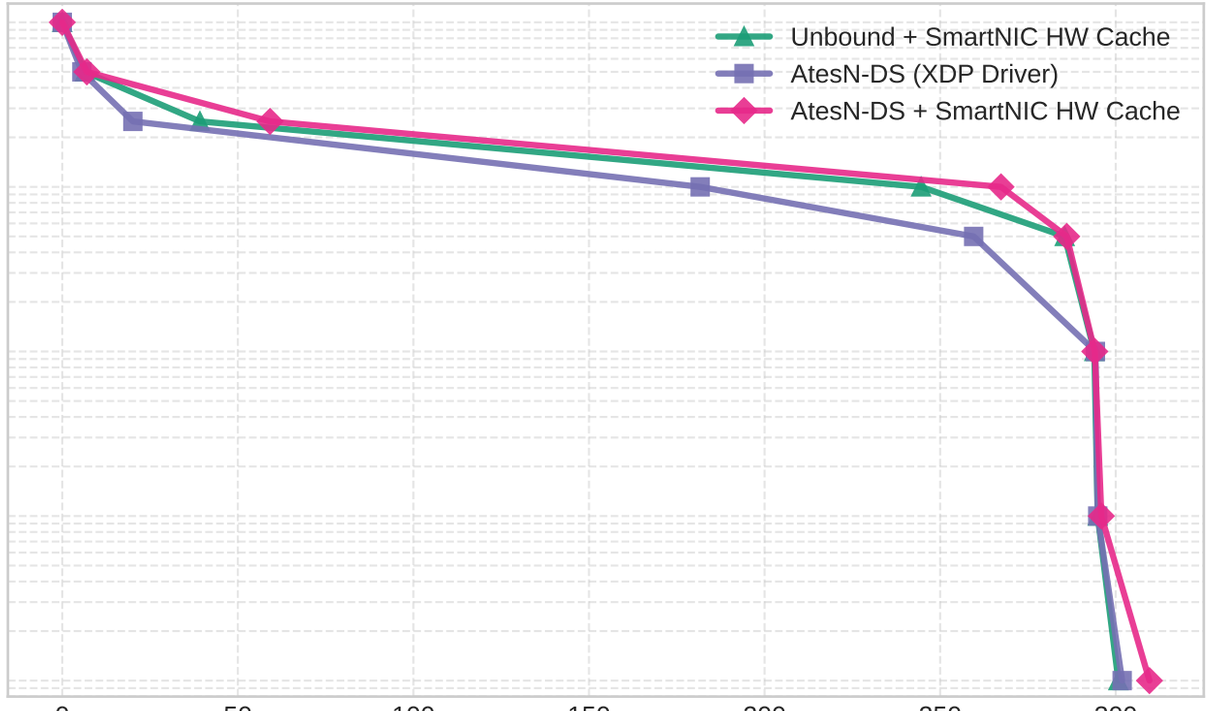
Complementary Cumulative Distribution Function (CCDF) of Latency Across Operational Modes ($n = 10$, 180s per run)

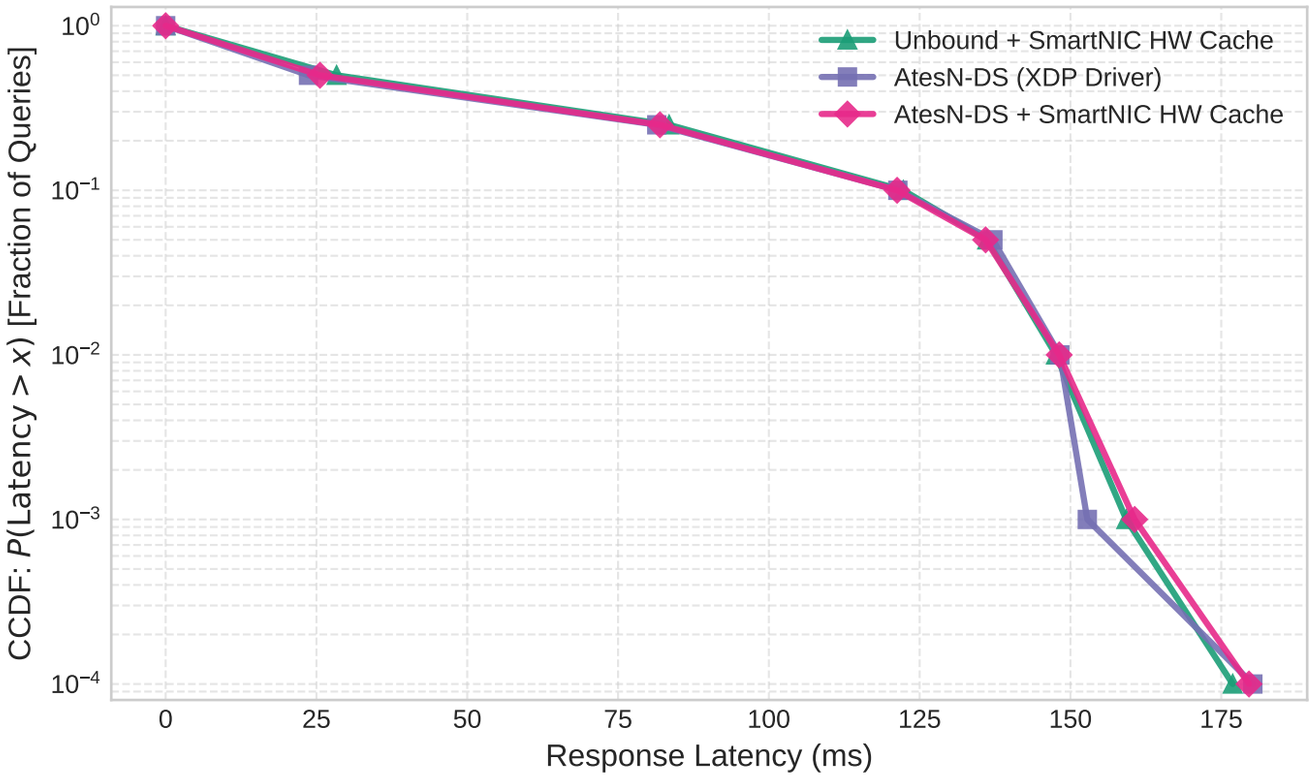
(a) Moderate Load: 200 kQPS
(All 4 modes operational)

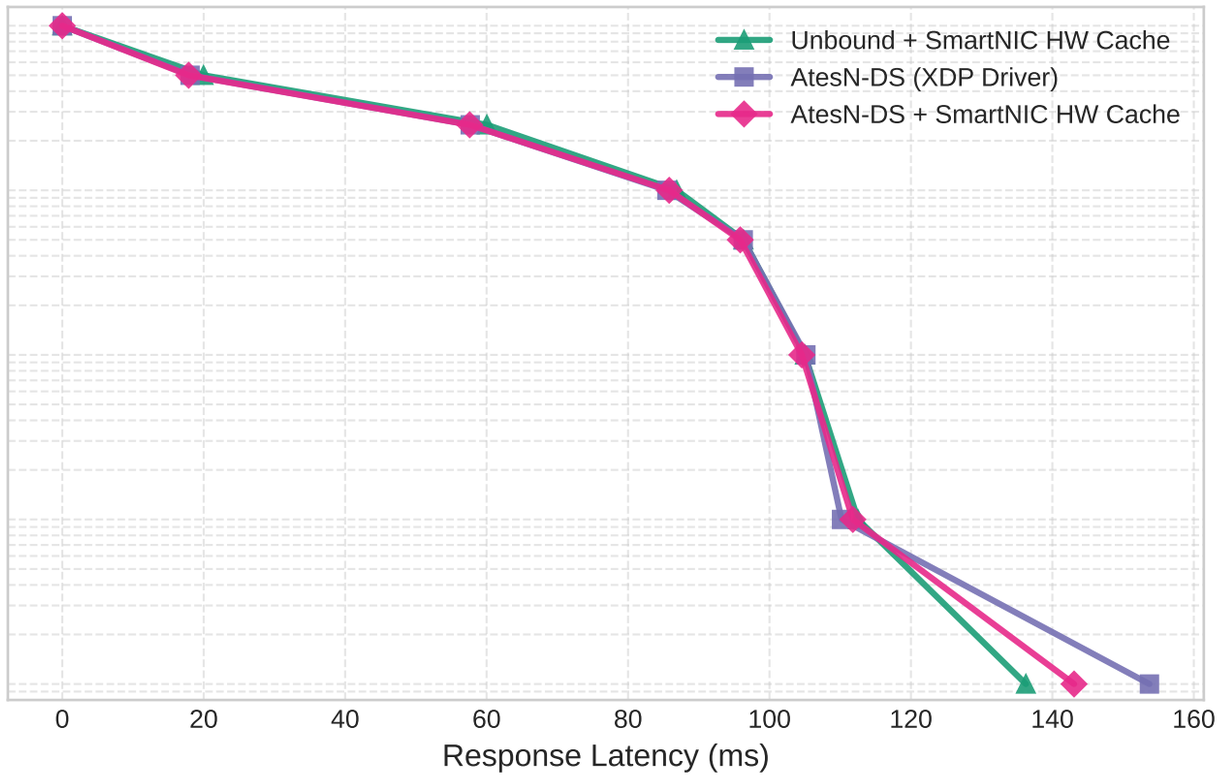


(b) High Load: 1.0 MQPS
(Unbound standalone excluded: >99.9% loss)



(c) High-Stress: 2.0 MQPS
(Unbound standalone excluded: >99.9% loss)





(d) Peak Line-Rate: 3.0 MQPS
(Unbound standalone excluded: 100% loss)
